

External Cleaning of Transport Containers

Ladies and Gentlemen,

Enclosed, please find our report about "External Cleaning of Transport Containers".

In detail it concerns about a unit for the foodstuffs industry, concretely for the jam production. We realized the described unit last year and already presented it in our "Impression 2003" (page 20/21).

With this topic it is to be assumed that still further similarly stored industries see the necessity to have their transportation containers also outside in a tidy and clean condition.

Here, both producers of similar products and the users of similar containers are applicable. It can be assumed that the more sensitively and/or a product is purer, the more also to outside cleanliness of the transport container one pays attention.

Please check urgently the existing industries in your regions for the need of such cleaning equipment and give us as soon as possible your feedback. Of course you can request also further copies of our "Impression 2003".

Basic data of the unit:

- Cleaning chamber with turntable desks
- Hot water, 800 bar
- Container sizes 1000 mm (, Height of 1280-1670 mm
- Pump unit RS 724 E/800

We are looking forward to receiving your results.

Please consider, that the enclosed documents are only for internal use and publicly accessible not be allowed.

URACA Pumpenfabrik GmbH & Co. KG
